

Scatter plot showing the light curves for three filters: **r** (red), **i** (blue), and **z** (green). The x-axis represents time in Modified Julian Days (MJD), ranging from approximately 56300 to 57400. The y-axis represents an unlabeled magnitude or flux. The plot displays three distinct clusters of data points, each containing points from all three filters. The filters are color-coded: **r** is red, **i** is blue, and **z** is green.
