

A scatter plot showing the relationship between the logarithm of the SED slope (y-axis) and time in Modified Julian Days (x-axis). The x-axis ranges from approximately 5630 to 5740 MJD, with major ticks at 56400, 56600, 56800, 57000, 57200, and 57400. The y-axis ranges from approximately 1.0 to 2.5, with major ticks at 1.0, 1.5, 2.0, and 2.5. Two data series are plotted: 'i' (purple dots) and 'z' (cyan dots). The 'z' series shows a clear upward trend, with values increasing from around 1.0 at 5630 MJD to over 2.0 at 5740 MJD. The 'i' series is more scattered, with values ranging from approximately 1.0 to 2.5 across the entire time range. A legend in the top right corner identifies the groups.
