

The scatter plot displays the distribution of four classes (g, r, i, z) in a 2D space. The legend indicates: g (purple), r (blue), i (green), and z (orange). The plot shows three main clusters of points, with some outliers. The clusters are roughly located in the lower-left, lower-middle, and lower-right regions of the plot. The points are colored according to their class: purple for 'g', blue for 'r', green for 'i', and orange for 'z'.
