

The figure is a scatter plot showing the time evolution of the color index $g-r-i-z$ for a source. The x-axis is labeled 'time [MJD]' and ranges from 56300 to 57400. The y-axis is unlabeled but represents the color index values. The data points are colored according to the filter used: g (purple), r (blue), i (green), and z (orange). The plot shows four distinct clusters of points, indicating periodic behavior. A legend in the top right corner identifies the filter colors.
