

A scatter plot showing the relationship between the logarithm of the spectral energy distribution (SED) slope and time in Modified Julian Days (MJD). The x-axis, labeled 'time [MJD]', ranges from 56300 to 57400. The y-axis, labeled 'log10(SED slope)', ranges from -1.5 to 1.5. Two data series are plotted: 'i' (purple dots) and 'z' (cyan dots). The 'i' series shows a general upward trend from approximately -1.2 at 56350 MJD to 0.5 at 56650 MJD, followed by a sharp drop to -1.5 at 57350 MJD. The 'z' series shows a general downward trend from approximately 0.5 at 56350 MJD to -1.5 at 56600 MJD, followed by a sharp rise to 0.5 at 57350 MJD. Both series exhibit significant scatter throughout the time range.
