

A scatter plot showing the time [MJD] on the x-axis (ranging from 56400 to 57400) versus an unlabeled y-axis. The data points are colored by filter: g (purple), r (cyan), i (green), and z (orange). The plot displays four distinct clusters of points, suggesting periodic observations. The clusters are located at approximately MJD 56300, 56600, 57000, and 57300. The y-axis values range from approximately 12 to 28. The z-filter observations (orange) are the most numerous, followed by i (green), r (cyan), and g (purple).
