

A scatter plot showing the distribution of four filter types (g, r, i, z) over time [MJD]. The x-axis ranges from 56400 to 57400 MJD. The y-axis represents a value from 0 to 100. The plot shows four distinct clusters of points, each corresponding to a filter type: g (purple), r (blue), i (green), and z (orange). The clusters are located at approximately 56350, 56600, 57000, and 57350 MJD. A legend in the top right corner identifies the filter types.
