

The figure is a scatter plot showing the relationship between time in Modified Julian Days (MJD) on the x-axis and luminosity in solar units on the y-axis. The x-axis ranges from approximately 56300 to 57400 MJD, with major ticks every 2000 units. The y-axis ranges from approximately 35 to 55, with major ticks every 2 units. There are two data series: 'i' (purple dots) and 'z' (cyan dots). The data points are clustered into three main groups along the time axis. In each group, the 'i' series points are generally higher on the y-axis than the 'z' series points. A legend in the top-left corner identifies the two series.
