

The scatter plot displays the spatial distribution of four classes (g, r, i, z) across three distinct regions. The x-axis represents a spatial coordinate ranging from 56400 to 57400. The y-axis is unlabeled. The legend indicates the following color coding: g (purple), r (cyan), i (green), and z (orange). The data points are clustered into three main groups, each containing a mix of the four classes, with some outliers.
